

## TASK 19 - DOX BLOX

The student matches each of three BLOX to their corresponding color, assembles them as one unit, and puts the completed assembly in the prescribed “finished” area. It is important to teach a specific assembly order (top to bottom or bottom to top) to ensure the finished assemblies are all the same. As the student’s use of inset jigs such as this one is expanded, routine ways of doing things have the potential to become strategies that can be adapted to a variety of tasks.

The order of the colored coins can be varied to promote flexibility. As with all tasks, ongoing assessment of whether or not the goal of the activity is a reasonable expectation for your student is important.

Mastery of this type of visual instruction and organization is foundational to many students attaining meaningful work later on in life.

### CONTENTS:

- (1) Shoebox base
- (1) Shoebox lid
- (1) 20 oz. container
- (3) colored coins
- (18) Blox, six of each color
