

TASK 25 - FLEX TUBE

The student moves red beads from a container and places them into the opening of a transparent, flexible plastic tube. Because the tube is movable, the coordinated effort of two hands will be necessary in order to accomplish the task

It is hoped that the interesting presentation of the task itself will be a motivating factor to the student. The sight of the bead as it rolls down the tube and into the base of the shoebox, as well as the sound of the bead hitting the bottom of the base is likely to add increased interest, encouraging the student to repeat the activity until finished.

CONTENTS:

- (1) Shoebox base
- (1) Shoebox lid
- (1) 20oz container
- (1) transparent tube
- (10) red beads
